

# PRODUCT REQUIREMENTS DOCUMENT (PRD)

**Product Name: ProxiFix**

---

## 1. 🧠 PRODUCT OVERVIEW

### 1.1 Vision

ProxiFix is a location-based marketplace designed to connect customers with nearby service providers (artisans, technicians, and workers) quickly and efficiently.

The platform focuses on:

- **Speed (proximity-based matching)**
  - **Trust (ratings + reputation)**
  - **Access-based monetization (credits + gamification)**
- 

### 1.2 Mission

“To make finding trusted help nearby fast, simple, and reliable.”

---

### 1.3 Problem Statement

In cities like Lagos and Abuja:

- People struggle to find **reliable artisans quickly**
  - Workers struggle to get **consistent job opportunities**
  - Trust is low in informal service markets
- 

### 1.4 Solution

ProxiFix provides:

- Location-based matching
- Worker discovery
- Job request system
- Reputation system
- Credit-based access to opportunities

---

## 2. TARGET USERS

### 2.1 Customers

- Tenants
- Homeowners
- Car owners
- Small business operators

---

### 2.2 Workers

- Plumbers
- Electricians
- Mechanics
- Technicians
- Cleaners

---

### 2.3 Admin

- Platform operators managing trust, disputes, and growth

---

## 3. CORE VALUE PROPOSITION

### For Customers:

- Fast access to nearby workers
- Reduced search stress
- Increased trust via ratings

---

### For Workers:

- More job opportunities
- Visibility based on performance
- Growth through ranking system

---

## 4. CORE FEATURES

---

## 4.1 Authentication

- Register/Login
  - Role selection (Customer / Worker)
- 

## 4.2 Job System

- Post job
  - View job
  - Accept/reject job
  - Track job status
- 

## 4.3 Location Matching

- Match workers based on proximity
  - Sort by distance + ranking
- 

## 4.4 Rating & Review

- Post-job rating
  - Reviews stored permanently
- 

## 4.5 Credit System (FixPoints)

### Concept:

Users perform actions using **credits (FixPoints)**

---

### Actions:

- Post Job → 2 credits
  - Bid Job → 1 credit
  - Boost Visibility → 2–3 credits
- 

### Free Credits:

- New users → 50 credits
- Bonus for:
  - First job completion
  - Referrals

---

---

## 4.6 Gamification System (CORE DIFFERENTIATOR)

---

### Worker Levels:

| Level | Name    |
|-------|---------|
| 1     | Starter |
| 2     | Active  |
| 3     | Trusted |
| 4     | Pro     |
| 5     | Elite   |

---

### Level-Up Criteria:

- Completed jobs
  - Ratings
  - Response time
  - Platform activity
- 

### Benefits:

- Higher visibility
  - Priority job access
  - Increased trust
- 

## 5. MONETIZATION STRATEGY

---

### 5.1 Primary Model:

#### Credit-based (FixPoints)

- Users buy credits
  - Credits unlock actions
- 

### 5.2 Pricing Strategy

- 1 credit  $\approx$  ₦10
  - Packages:
    - ₦500  $\rightarrow$  50 credits
    - ₦1000  $\rightarrow$  110 credits
    - ₦2000  $\rightarrow$  250 credits
- 

### 5.3 Payment Integration

- Use Paystack
- 

### 5.4 Key Principle:

“Users pay for access to opportunities, not transactions”

---

## 6. SUCCESS METRICS

- Completed jobs
  - Job success rate
  - Credit purchase rate
  - User retention
  - Worker engagement
-

# SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

---

## 1. SYSTEM OVERVIEW

A Django-based web platform that:

- Connects users via location
  - Uses credits for interaction
  - Implements gamification logic
- 

## 2. SYSTEM ARCHITECTURE

- Frontend: Django Templates + Bootstrap
  - Backend: Django
  - Database: PostgreSQL
  - Payments: Paystack
- 

## 3. CORE MODULES

---

### 3.1 Authentication Module

- User registration
  - Role management
  - Login/logout
- 

### 3.2 Job Module

- Create job
  - Assign job
  - Track job lifecycle
- 

### 3.3 Wallet Module

**Models:**

- Wallet (balance)
- Transaction (credit/debit)

- CreditPurchase
- 

### 3.4 Gamification Engine

---

#### Responsibilities:

- Track points
  - Calculate levels
  - Update rankings
- 

#### Example Logic:

- Job completed → +10 points
  - Rating  $\geq 4$  → +5 points
  - Fast response → +2 points
- 

### 3.5 Matching Engine

- Filter workers by location
  - Sort by:
    - Distance
    - Rating
    - Level
- 

## 4. FUNCTIONAL REQUIREMENTS

- Users must register/login
  - Users must post jobs using credits
  - Workers must bid using credits
  - System must track job status
  - System must update levels automatically
- 

## 5. NON-FUNCTIONAL REQUIREMENTS

- Response time < 3 seconds
  - Secure authentication
  - Scalable architecture
  - High availability
-

## 6. DATA FLOW

1. User registers
  2. Wallet initialized
  3. Credits assigned
  4. Job created
  5. Worker bids
  6. Job completed
  7. Rating submitted
  8. Points updated
- 

## UI FLOW DOCUMENT

---

### 1. CUSTOMER FLOW

1. Register/Login
  2. Receive 50 credits
  3. Post job (2 credits deducted)
  4. View nearby workers
  5. Send request
  6. Worker accepts
  7. Job completed
  8. Rate worker
- 

### 2. WORKER FLOW

1. Register
  2. Receive credits
  3. View job list
  4. Bid (1 credit deducted)
  5. Accept job
  6. Complete job
  7. Receive rating
  8. Level up
-

### 3. 🎮 GAMIFICATION FLOW

1. User completes action
  2. System assigns points
  3. Points accumulate
  4. Level increases
  5. Visibility improves
- 

### 4. 💳 CREDIT FLOW

1. User receives free credits
  2. Credits used for actions
  3. Balance reduces
  4. User prompted to buy more
  5. Payment processed via Paystack
  6. Wallet updated
- 

### 5. 🔄 RETENTION LOOP (VERY IMPORTANT)

👉 This is your growth engine:

1. User gets job
  2. Completes job
  3. Gains rating
  4. Gains level
  5. Gets more visibility
  6. Gets more jobs
  7. Buys more credits
- 

### 6. 🧠 UX PRINCIPLES

- Minimal friction
  - Fast actions
  - Clear feedback
  - Trust-first design
-

# PROXIFIX LEVELING SYSTEM (FULL DESIGN)

---

## 1. CORE PRINCIPLE

- 👉 Users don't level up by just being active
  - 👉 They level up by **creating value on the platform**
- 

## 2. EXPERIENCE POINT (XP) SYSTEM

We introduce:

- 👉 **XP (Experience Points)**
  - 👉 XP determines level
- 

## XP SOURCES (WORKERS)

---

### Job Completion

- +10 XP per completed job
- 

### Ratings Bonus

- 5-star → +10 XP
  - 4-star → +5 XP
  - 3-star → +2 XP
  - ≤2-star → 0 XP
- 

### Fast Response Bonus

- Accept job within 5 mins → +3 XP
-

## Consistency Bonus

- 3 jobs in a week → +5 XP
  - 10 jobs in two weeks → +15 XP
- 

## First-Time Bonus

- First job completed → +20 XP
- 

# ANTI-SPAM RULE (VERY IMPORTANT)

 XP only counts if:

- The job is marked completed
  - Review is submitted
- 

## 3. LEVEL THRESHOLDS

We use **progressive leveling** (harder as you grow)

---

## LEVEL STRUCTURE

| Level | Name    | XP Required |
|-------|---------|-------------|
| 1     | Starter | 0           |
| 2     | Active  | 50          |
| 3     | Trusted | 150         |
| 4     | Pro     | 500         |
| 5     | Elite   | 1000        |

---

 This ensures:

- Early progress feels fast
- Later progress feels valuable

## 4. LEVEL BENEFITS (CRITICAL FOR RETENTION)

---

### Visibility Multiplier

| Level   | Visibility Boost |
|---------|------------------|
| Starter | 1x               |
| Active  | 1.2x             |
| Trusted | 1.5x             |
| Pro     | 2x               |
| Elite   | 3x               |

---

This affects:

- Search ranking
  - Job matching
- 

### Job Access Priority

- Starter → limited jobs
  - Active → normal access
  - Trusted+ → early access to jobs
- 

### Trust Badge

- Trusted → ✓ Verified
  - Pro → ★ Pro
  - Elite → 🔥 Elite
-

## 6. CREDIT + LEVEL INTERACTION

This is where money comes in 👉

---

### Rule:

👉 Higher level = better ROI on credits

---

### Example:

| Level   | Cost to Bid | Visibility |
|---------|-------------|------------|
| Starter | 1 credit    | low        |
| Pro     | 1 credit    | HIGH       |

---

👉 So:

- Same cost
  - Different results
- 

This encourages:

“Let me stay active and grow”

---

## 7. RANKING ALGORITHM (VERY IMPORTANT)

When showing workers:

---

### Ranking Score Formula

Score = (XP × 0.4) + (Rating × 0.3) + (Response Speed × 0.2) + (Distance × 0.1)

---

## Breakdown:

- XP → Experience
  - Rating → Trust
  - Speed → Reliability
  - Distance → Proximity
- 

👉 This ensures:

- Not just old users win
  - Good behavior wins
- 

## 8. LEVEL DECAY

To prevent inactive users dominating:

### Rule:

- No activity for 21 days → -5% XP
  - No activity for 90 days → -10% XP
- 

👉 Keeps the platform active

---

## 9. CUSTOMER SIDE

You can also gamify customers:

---

### Customer XP:

- Post job → +5 XP
  - Complete job → +5 XP
  - Leave review → +5 XP
-

## Benefits:

- Discounts on credits
  - Priority support
- 

## 10. PSYCHOLOGY BEHIND THIS SYSTEM

---

### Why it works:

#### 1. Progression

“I’m growing”

---

#### 2. Status

“I’m now Trusted / Pro”

---

#### 3. Reward Loop

“More jobs → more money”

---

#### 4. Lock-in

“I can’t leave this platform”

---
